Lesson7 This document is for use in eTOC training sessions, use outside of eTOC is strictly prohibited.

For Teachers: Please have the students read the sentences one at a time and correct their pronunciation of each sentence then have them repeat after you. Wait until after they read the sentence (use the number in place of the missing word) to have the students choose the correct answer to fill in the blank. When the students finish the article, move on to the further questions.

2[B] — Earth's Unexplored Frontier

Version3 G1 11-2

固(かた)い核(かく)

Our planet consists of a <u>solid core</u> surrounded by several layers.

最(もっと)も外側(そとがわ)の 地殻(ちかく)

- 2. The relatively thin outermost layer, called the crust, is composed of different types of rock with varying compositions.
- 3. The layer beneath the crust—nearly 3,000 kilometers thick—is called the mantle.

地球科学者(ちきゅうかがくしゃ)

- 4. Geoscientists (*29*) to obtain samples directly from this layer.
- 5. The rock in Earth's crust originate in the mantle, so learning more about the mantle would help them understand how the planet's surface formed.
- 6. It would also increase understanding of <u>plate tectonics</u>—the way pieces of the crust move.

かたま

- In the past, isolated chunks of the mantle have surfaced through volcanic eruptions, and small parts of the mantle have been found on the ocean floor.
- 8. However, these provide little more than vague hints about the actual mantle because their chemical and physical structure is substantially altered as they make their way to the surface.

*Choose the correct answer to fill in the blank from these choices.

- 9. **(29) 1** have long wanted
- 2 may suspend their plan
- 3 cannot get permission
- 4 could miss the chance

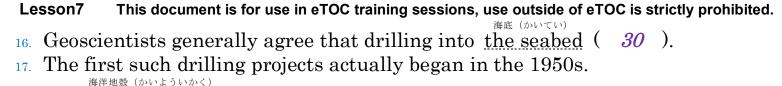

Further Questions&A*Ask student to answer the question on their own at first. If the student can't answer correctly, have him look at the last page and read the "example answer" for the question. Have the student try to memorize the answer, if it's too long or difficult, you should divide the sentence into 2 or 3 parts to make it easier to remember. Once they have memorized the answer, the teacher should ask the question one last time so that the student can practice answering. Also if you find any mistakes, please mark the page and let me know ASAP.

- 11. 1)What is the mantle? マントルとは筒ですか。
 - It is the layer beneath the crust.
- 12. 2) What could scientists learn by studying the mantle?
- 13. 科学者たちはマントルの研究から何を学ぶことができましたか。

It would help them understand how the planet's surface formed and increase understanding of plate tectonics.

- 14. 3) Have scientists obtained pieces of the mantle before?
- 15. 科学者たちは以前にマントルのかけらを入手したことがありますか。

Yes, isolated pieces of the mantle have surfaced through volcanic eruptions and small parts of the mantle have been found on the ocean floor.

- The oceanic crust—the part of the Earth's crust located beneath the oceans—is thinner than the crust beneath land masses, and scientists have managed to about a third of the way through it. pierce ~を考慮(こうりょ)して
- <u>In light of</u> recent technological improvements, drilling beyond the crust now seems feasible.
- 20. Researchers led by U.K. geologist Damon Teagle have announced plans to drill of the coast of Costa Rica to finally reach the underlying mantle.
 - *Choose the correct answer to fill in the blank from these choices.
- carries a number of risks will not work in practice
- has damaged the mantle is the way to achieve success 22.

Further Questions&A

27.

- 4) Why is drilling into the seabed the best way to reach the mantle?
- 海底に穴をあけることがマントルに到達するための最善の方法だといえるのはなぜですか。 The oceanic crust is thinner than the crust beneath land masses.
 - 5) Where does Damon Teagle plan to drill?
- デーモン・ティーグルの計画では、どこに気をあけることになっていますか。

He plans to drill off the coast of Costa Rica.

- Teagle's project is not without critics.
- Some scientists say the heterogeneous composition of the mantle means samples taken from a single location would reveal little of the mantle's overall nature. Geoscientist Erik Klemetti, however, argues that (31
- The earth sciences have traditionally sparked little interest among the general public and received less government funding than other scientific fields, and Klemetti says this is the result of geoscientists' failure to "think big when it comes to projects."
- 31. He believes a major effort to drill all the way to the Earth's mantle could be the earth-science equivalent of the first moon landing, as the mere fact we could reach such a distant frontier "would be the real success."

*Choose the correct answer to fill in the blank from these choices.

- (31)1 this cannot be proven 2 this is beside the point
- Teagle should exercise caution Teagle's project is too complex. 4 33.

Further Questions&A

- 34. 6) Why would a sample of the mantle taken from a single location reveal little of the mantle's overall nature?
- 一が所から採取されたマントルのサンプルではマントル全体の本質をほとんど前らかにできないのはなぜですか。

The mantle is heterogeneous—it is different under different parts of the world.

Lesson7 This document is for use in eTOC training sessions, use outside of eTOC is strictly prohibited.

- ^{36.} 7) Why does Klemetti argue that geoscientists haven't received the same funding as other sciences?
- **37.** なぜクレメッティは、地球科学者は他の科学者ほど資金提供を受けていないと主張しているのですか。 *They have failed to "think big when it comes to projects".*
- 8) What does Klemetti mean when he says reaching the mantle would be the earth-science equivalent of the first moon landing?
- 39. クレメッティの言う、マントルに到達することは地球科学では最初に見に着陸したことと同等だ、とはどういう意味ですか。
- 40. He means that it would prove we could reach such a distant frontier and increase public interest in the science.

Review Questions

- 1) What is the mantle?

 It is the layer beneath the crust.
- What could scientists learn by studying the mantle?

 It would help them understand how the planet's surface formed and increase understanding of plate tectonics.
- 43. 3) Have scientists obtained pieces of the mantle before?

 Yes, isolated pieces of the mantle have surfaced through volcanic eruptions and small parts of the mantle have been found on the ocean floor.
- 44. 4) Why is drilling into the seabed the best way to reach the mantle? *The oceanic crust is thinner than the crust beneath land masses.*
- 45. 5) Where does Damon Teagle plan to drill? He plans to drill off the coast of Costa Rica.
- 46. 6) Why would a sample of the mantle taken from a single location reveal little of the mantle's overall nature?

 The mantle is heterogeneous—it is different under different parts of the world.
- 7) Why does Klemetti argue that geoscientists haven't received the same funding as other sciences?

 They have failed to "think big when it comes to projects".
- 8) What does Klemetti mean when he says reaching the mantle would be the earth-science equivalent of the first moon landing?

 He means that it would prove we could reach such a distant frontier and increase public interest in the science.

日本語訳なし

2[B] – Earth's Unexplored Frontie

Version3 G1 11-2

固(かた)い核(かく)

- 49. Our planet consists of a solid core surrounded by several layers.
- 50. The relatively thin outermost layer, called the crust, is composed of different types of rock with varying compositions.
- The layer beneath the crust—nearly 3,000 kilometers thick—is called the mantle.

Lesson7 This document is for use in eTOC training sessions, use outside of eTOC is strictly prohibited.

- 52. Geoscientists (29) to obtain samples directly from this layer.
- The rock in Earth's crust originate in the mantle, so learning more about the mantle would help them understand how the planet's surface formed.
- 54. It would also increase understanding of <u>plate tectonics</u>—the way pieces of the crust move.
- 55. In the past, isolated chunks of the mantle have surfaced through <u>volcanic</u> <u>eruptions</u>, and small parts of the mantle have been found on the ocean floor.
- 56. However, these provide little more than vague hints about the actual mantle because their chemical and physical structure is substantially altered as they make their way to the surface.
 - *Choose the correct answer to fill in the blank from these choices.
- 57. **(29)** 1 have long wanted
- 2 may suspend their plan
- 3 cannot get permission
- 4 could miss the chance

Further Questions&A

- 59. 1) What is the mantle?
- 60. 2) What could scientists learn by studying the mantle?
- 61. 3) Have scientists obtained pieces of the mantle before?
- 62. Geoscientists generally agree that drilling into the seabed (30).
- 63. The first such drilling projects actually began in the 1950s.
- The <u>oceanic crust</u>—the part of the Earth's crust located beneath the oceans—is thinner than the crust beneath <u>land masses</u>, and scientists have managed to pierce about a third of the way through it.
- 65. <u>In light of recent technological improvements</u>, drilling beyond the crust now seems feasible.
- 66. Researchers led by U.K. geologist Damon Teagle have announced plans to drill of the coast of Costa Rica to finally reach the underlying mantle.
 - *Choose the correct answer to fill in the blank from these choices.
- 67. (30) 1 will not work in practice
- 2 carries a number of risks
- 3 has damaged the mantle
- 4 is the way to achieve success

Further Questions&A

68.

- 69. 4) Why is drilling into the seabed the best way to reach the mantle?
- 70. 5) Where does Damon Teagle plan to drill?
- 71. Teagle's project is not without critics.
- Some scientists say the <u>heterogeneous composition</u> of the mantle means samples taken from a single location would reveal little of the mantle's overall nature. Geoscientist Erik Klemetti, however, argues that (*31*).
- 73. The earth sciences have traditionally sparked little interest among the general public and received less government funding than other scientific fields, and Klemetti says this is the result of geoscientists' failure to "think big when it comes to projects."

This document is for use in eTOC training sessions, use outside of eTOC is strictly prohibited.

74. He believes a major effort to drill all the way to the Earth's mantle could be the earth-science equivalent of the first moon landing, as the mere fact we could reach such a distant frontier "would be the real success."

*Choose the correct answer to fill in the blank from these choices.

- (31)1 this cannot be proven
- 2 this is beside the point
- Teagle should exercise caution4 Teagle's project is too complex. 76.

Further Questions&A

- 77. 6) Why would a sample of the mantle taken from a single location reveal little of the mantle's overall nature?
- 78. 7) Why does Klemetti argue that geoscientists haven't received the same funding as other sciences?
- 79. 8) What does Klemetti mean when he says reaching the mantle would be the earth-science equivalent of the first moon landing?

Review Questions

- 80. 1)What is the mantle?
- What could scientists learn by studying the mantle?

 It would help them understand how the It would help them understand how the planet's surface formed and increase understanding of plate tectonics.
- 3) Have scientists obtained pieces of the mantle before? Yes, isolated pieces of the mantle have surfaced through volcanic eruptions and small partso f the mantle have been found on the ocean floor.
- 83. 4) Why is drilling into the seabed the best way to reach the mantle? The oceanic crust is thinner than the crust beneath land masses.
- 84. 5) Where does Damon Teagle plan to drill? He plans to drill off the coast of Costa Rica.
- 85. 6) Why would a sample of the mantle taken from a single location reveal little of the mantle's overall nature?

The mantle is heterogeneous—it is different under different parts of the world.

7) Why does Klemetti argue that geoscientists haven't received the same funding as other sciences?

They have failed to "think big when it comes to projects".

8) What does Klemetti mean when he says reaching the mantle would be the earth-science equivalent of the first moon landing?

He means that it would prove we could reach such a distant frontier and increase public interest in the science.
