Wolves in Yellowstone Park

Thanks to a controversial but very successful reintroduction program, wolves are now in Yellowstone again after an absence of almost 70 years. These wolves had been hunted to near extinction on the North American continent. Several dozen wolves were captured in Canada and turned loose in Yellowstone in March 1995. Those animals have done remarkably well, reproducing at a rapid rate. Packs are now located in various parts of the park. Wolves prey on a variety of species, notably elk in the Yellowstone area, but will also pursue moose, deer, sheep and other animals. However, cattle ranchers in the nearby area complained that the wolves were killing their livestock.
