

# Managing Web Hosting & Domain Setup

## Part 1: Office Roleplay Dialogue

**Scenario:** A Web Developer, Hiroshi, is working with his colleague, Daniel, to set up and maintain web hosting and domain settings for a new company website.

---

**Daniel:** Hey Hiroshi, have you finished setting up the **web hosting** for our new company website?

**Hiroshi:** Almost! I configured the **server** and linked it to our domain, but I need to check the **DNS (Domain Name System)** settings to make sure everything points correctly.

**Daniel:** Good idea. Sometimes, DNS changes take a while to update. Do we need to use **FTP (File Transfer Protocol)** to upload the site files?

**Hiroshi:** Yes, I already set up the **FTP** credentials so we can transfer files to the **server** easily.

**Daniel:** That's great. What about security? Do we have an **SSL certificate** installed?

**Hiroshi:** Not yet, but I'll install an **SSL certificate** today to enable HTTPS. That will encrypt user data and improve our site's security.

**Daniel:** Sounds perfect. Let's test everything once the changes are applied.

**Hiroshi:** Agreed! I'll update you once the setup is complete.

---

## Part 2: Comprehension Questions

### 1. What is Hiroshi setting up for the new website?

- (A) A mobile application
- (B) A new social media account
- (C) A desktop software program
- (D) Web hosting

### 2. Why is DNS important for a website?

- (A) It translates domain names into IP addresses
- (B) It improves the website's loading speed
- (C) It protects websites from hackers
- (D) It creates new email accounts

### 3. What is FTP used for?

- (A) To monitor website visitor statistics
- (B) To update website colors and fonts
- (C) To transfer files between a computer and a server
- (D) To increase internet speed

### 4. What is the purpose of an SSL certificate?

- (A) To add a new website feature
- (B) To encrypt user data and secure website connections
- (C) To reduce the number of website pages
- (D) To make the website load faster

---

## Part 3: Key Vocabulary Definitions in Japanese

1. **Web Hosting (ウェブホスティング)** – ウェブサイトをインターネット上で公開するためのサービス。

2. **DNS (Domain Name System) (ドメインネームシステム)** – ドメイン名を IP アドレスに変換する仕組み。
  3. **FTP (File Transfer Protocol) (ファイル転送プロトコル)** – コンピューターとサーバー間でファイルを転送するための通信プロトコル。
  4. **SSL Certificate (SSL 証明書)** – ウェブサイトとユーザーの間の通信を暗号化し、セキュリティを向上させる証明書。
  5. **Server (サーバー)** – ウェブサイトのデータを保存し、ユーザーのリクエストに応じてコンテンツを提供するコンピューター。
- 

## Part 4: Questions & Correct Answers

1. **What is Hiroshi setting up for the new website?**  
☒ (D) Web hosting
2. **Why is DNS important for a website?**  
☒ (A) It translates domain names into IP addresses
3. **What is FTP used for?**  
☒ (C) To transfer files between a computer and a server
4. **What is the purpose of an SSL certificate?**  
☒ (B) To encrypt user data and secure website connections
